Profile

As a backend software developer, my goal is to build scalable products that deliver exceptional user experiences. I am passionate about building efficient, secure, and production-ready backend systems. I have a strong understanding of development tools and languages, and I excel as a team player with a positive attitude toward collaboration. I am proficient in Agile methodology and possess solid knowledge of project and team management technologies essential for software development.

Education

B.Sc. Computer Science — Redeemer's University (2020 – 2024)

Experience

Backend Developer — Courtleigh Solutions

- Developed and maintained backend services using NestJS, Node.js, TypeORM, and PostgreSQL.
- Implemented secure JWT-based authentication and role-based authorization.
- Designed optimized database schema and API endpoints for scalability.
- Collaborated with frontend developers to integrate APIs and deliver features.
- Documented APIs using Swagger and managed source code with GitHub.
- Dockerizing applications for consistent deployment environments.

Tools Used: Nestjs, PostgreSQL, Swagger, Docker, Github

Backend Developer - Algoritic inc

- Developed and maintained a role-based finance management REST API
- Built user management features including role assignment and account status control
- Designed and implemented financial record CRUD operations with advanced filtering, search, and pagination
- Created dashboard endpoints to provide summarized financial insights for different user roles.
- Structured scalable API architecture with middleware for authentication, authorization, and validation.
- Tested and validated API endpoints using Postman to ensure reliability and proper request/response handling.
- Wrote and executed automated tests using Jest and managed development workflows .

Tools Used: Node.js, Express.js, PostgreSQL, Prisma ORM, Zod, Jest, Postman, GitHub

Projects

VendorHub API

- Developed a scalable multi-vendor e commerce backend API.
- Built vendor and product management systems to support multi-vendor operations
- Implemented asynchronous background job processing using Redis and BullMQ for improved performance and scalability.
- Set up queue monitoring dashboard to track and manage background jobs
- Tested and validated API endpoints using Postman to ensure reliability and proper functionality
